The screenshot shows the Kodi interface for managing add-on dependencies. On the left, there is a card for the 'URLResolver' add-on, which features a globe icon and the text 'urlresolver'. Below the icon, it states: 'Resolve common video host URL's to be playable in XBMC/Kodi, simplify addon development of video plugins requiring multi video hosts.' At the bottom left of the card is an 'Options' button. On the right, a list of installed dependencies is shown, each with a checkmark icon. The 'URLResolver' add-on is highlighted in a blue bar. The list includes: requests, ResolveURL, simplejson, six, The Movie Database Scraper Library, TheAudioDb Scraper Library, TKNorris Common Libraries, unicode, urllib3, URLResolver (highlighted), and xmldict. To the right of the list, the version numbers and authors for each dependency are listed. At the top right of the screen, the time is 3:36 AM. The background features a large, stylized globe graphic and the 'TVADDONS' logo at the bottom.
